North Carolina

6 December

1994

CONCLUSION The results of this study suggest that the use of a single, standardized, and validated questionnaire is a feasible and reliable method for assessing the prevalence of occupational stress in a large, multi-site, multi-national sample of health care workers. The prevalence of occupational stress was found to be high, and the results suggest that the use of a single, standardized, and validated questionnaire is a feasible and reliable method for assessing the prevalence of occupational stress in a large, multi-site, multi-national sample of health care workers.
